

Three things you can build today

Pick your goal. Each one uses a different part of the stack.

Launch a token

Fixed supply, fair launch,
tradable in wallets.

uses **KCC-20**

Build a vault

Coins with spending rules:
time locks, limits, escrow.

uses **Silverscript**

Build an app

Games, markets, agents —
many rules working together.

uses **Argent**

All three end up as covenants on Kaspas L1 — no separate chain, no bridge.
